

WinLaser ID *Glass Laser Etcher*

The *WinLaser ID* is an automated laser etcher for permanently identifying all windows.

The *WinLaser ID* reads from pre-printed bar code labels and completes the identification during the manufacturing process without the need of additional setup or tool changing.

With the permanent identifier (which is unobtrusive on the completed window) any required warranty or repair work can be done with only one service call as the ID number will reveal all sizes, specs, etc. of the original order without the need for additional measuring trips.

The ID number can also include your IGMAC &/or CSA numbers as well as your logo and order date. All these items can be added or deleted at your option.
